

ON THE

GENESIS OF SPECIES.

BY

ST. GEORGE MIVART, F. R. S.

NEW YORK:
D. APPLETON AND COMPANY,
549 & 551 BROADWAY.
1871.

TO

SIR HENRY HOLLAND, BART., M. D.,
F. R. S., D. C. L., ETC., ETC.

MY DEAR SIR HENRY:

In giving myself the pleasure to dedicate, as I now do, this work to you, it is not my intention to identify you with any views of my own advocated in it.

I simply avail myself of an opportunity of paying a tribute of esteem and regard to my earliest scientific friend—the first to encourage me in pursuing the study of Nature.

I remain,

My dear Sir Henry,

Ever faithfully yours,

ST. GEORGE MIVART.

7 North Bank Regent's Park,
December 8, 1870.

CONTENTS.

CHAPTER I.

INTRODUCTORY.

The Problem of the Genesis of Species stated.- Nature of its Probable Solution.- Importance of the Question.- Position here defended.- Statement of the DARWINIAN THEORY.- Its Applicability to Details of Geographical Distribution; to Rudimentary Structures; to Homology; to Mimicry, etc.- Consequent Utility of the Theory.- Its Wide Acceptance-Reasons for this, other than, and in Addition to, its Scientific Value.- Its Simplicity.- Its Bearing on Religious Questions.- *Odium Theologicum* and *Odium Antitheologicum*.- The Antagonism supposed by many to exist between it and Theology neither necessary nor universal.- Christian Authorities in favor of Evolution.- Mr. Darwin's "Animals and Plants under Domestication."-Difficulties of the Darwinian Theory enumerated p. 13

CHAPTER II

THE INCOMPETENCY OF "NATURAL SELECTION TO ACCOUNT FOR THE INCIPIENT STAGES OF USEFUL STRUCTURES.

Mr. Darwin supposes that Natural Selection acts by Slight Variations.- These must be useful at once.- Difficulties as to the Giraffe; as to Mimicry; as to the Heads of Flat-fishes; as to the Origin and Constancy of the Vertebrate Limbs; as to Whalebone; as to the Young Kangaroo; as to Sea-urchins; as to Certain Processes of Metamorphosis; as to the Mammary-gland; as to Certain Ape Characters; as to

the Rattlesnake and Cobra; as to the Process of Formation of the Eye and Ear, as to the Fully-developed Condition of the Eye and Ear; as to the 'Voice; as to Shellfish; as to Orchids; as to Ants.- the Necessity for the Simultaneous Modification of Many Individuals.- Summary and Conclusion . . . p. 35

CHAPTER III.

THE COEXISTENCE OF CLOSELY-SIMILAR STRUCTURES OF DIVERSE ORIGIN.

Chances against Concordant Variations.- Examples of Discordant Ones.- Concordant Variations not unlikely on a non-Darwinian Evolutionary Hypothesis.- Placental and Implacental Mammals.- Birds and Reptiles.- Independent Origins of Similar Sense Organs.- The Ear.- The Eye.- Other Coincidences.- Causes besides Natural Selection produce Concordant Variations in Certain Geographical Regions.- Causes besides Natural Selection produce Concordant Variations in Certain Zoological and Botanical Groups.- There are Homologous Parts not genetically related.- Harmony In respect of the Organic and Inorganic Worlds.- Summary and Conclusion. . . . p. 76

CHAPTER IV.

MINUTE AND GRADUAL MODIFICATIONS.

There are Difficulties as to Minute Modifications, even if not fortuitous.- Examples of Sudden and Considerable Modifications of Different Kinds.- Prof. Owen's View.- Mr. Wallace.- Prof. Huxley.- Objections to Sudden Changes.- Labyrinthodont.- Potto.- Cetacea.- As to Origin of Bird's Wing.- Tendrils of Climbing Plants.- Animals once supposed to be Connecting Links.- Early Specialization of Structure. -Macrauchenia.- Glyptodon.- Sabre-toothed Tiger.- Conclusion p. 111

CHAPTER V.

AS TO SPECIFIC STABILITY.

What Is meant by the Phrase "Specific Stability;" such Stability to be expected *a priori*, or else Considerable Changes at once.- Rapidly-increasing Difficulty of intensifying Race Characters; Alleged Causes of this Phenomenon; probably

an Internal Cause coöperates.- A Certain Definiteness in Variations.- Mr. Darwin admits the Principle of Specific Stability in Certain Cases of Unequal Variability.- The Goose-The Peacock.- The Guinea-fowl.- Exceptional Causes of Variation under Domestication.- Alleged Tendency to Reversion-Instances.- Sterility of Hybrids.- Prepotency of Pollen of Same Species, but of Different Race.- Mortality in Young Gallinaceous Hybrids.- A Bar to Intermixture exists somewhere.- Guinea-pigs.- Summary and Conclusion p. 121

CHAPTER VI.

SPECIES AND TIME.

Two Relations of Species to Time.- No Evidence of Past Existence of Minutely-intermediate Forms when such might be expected *a priori*.- Bats, Pterodactyls, Dinosauria, and Birds.- Ichthyosauria, Chelonia, and Anoura.- Horse Ancestry.- Labyrinthodonts and Trilobites.- Two Subdivisions of the Second Relation of Species to Time.- Sir William Thomson's Views-Probable Period required for Ultimate Specific Evolution from Primitive Ancestral Forms.- Geometrical Increase of Time required for Rapidly-multiplying Increase of Structural Differences.- Proboscis Monkey.- Time required for Deposition of Strata necessary for Darwinian Evolution.- High Organization of Silurian Forms of Life.- Absence of Fossils in Oldest Rocks.- Summary and Conclusion p. 142

CHAPTER VII.

SPECIES AND SPACE.

The Geographical Distribution of Animals presents Difficulties.- These not insurmountable in themselves; harmonize with other Difficulties.- Fresh-water Fishes. -Forms common to Africa and India; to Africa and South America; to China and Australia; to North America and China; to New Zealand and South America; to South America and Tasmania; to South America and Australia.- Pleurodont Lizards.- Insectivorous Mammals.- Similarity of European and South American Frogs.- Analogy between European Salmon and Fishes of New Zealand, etc.- An Ancient Antarctic Continent probable.- Other Modes of accounting for Facts of Distribution.- Independent Origin of Closely-similar Forms.- Conclusion p. 158

CHAPTER VIII.

HOMOLOGIES.

Animals made up of Parts mutually related in Various Ways.- What Homology is. -Its Various Kinds.- Serial Homology.- Lateral Homology.- Vertical Homology. -Mr. Herbert Spencer's Explanations.- An Internal Power necessary, as shown by Facts of Comparative Anatomy.- Of Teratology.- M. St. Hilaire.- Prof. Burt Wilder.- Foot-wings.- Facts of Pathology.- Mr. James Paget.- Dr. William Budd.- The Existence of such an Internal Power of Individual Development diminishes the Improbability of an Analogous Law of Specific Origination p. 169

CHAPTER IX.

EVOLUTION AND ETHICS.

The Origin of Morals an Inquiry not foreign to the Subject of this Book.- Modern Utilitarian View as to that Origin.- Mr. Darwin's Speculation as to the Origin of the Abhorrence of Incest.- Cause assigned by him insufficient.- Care of the Aged and Infirm opposed by "Natural Selection;" also Self-abnegation and Asceticism.- Distinctness of the Ideas "Right" and "Useful."-Mr. John Stuart Mill.- Insufficiency of "Natural Selection" to account for the Origin of the Distinction between Duty and Profit.- Distinction of Moral Acts into "Material" and "Formal."- No Ground for believing that Formal Morality exists in Brutes.- Evidence that it does exist in Savages.- Facility with which Savages may be misunderstood.- Objections as to Diversity of Customs.- Mr. Hutton's Review of Mr. Herbert Spencer.- Anticipatory Character of Morals.- Sir John Lubbock's Explanation.- Summary and Conclusion p. 202

CHAPTER X.

PANGENESIS.

A Provisional hypothesis supplementing "Natural Selection." -Statement of the Hypothesis.- Difficulty as to Multitude of Gemmules.- As to Certain Modes of Reproduction-As to Formations without the Requisite Gemmules.- Mr. Lewes and Prof. Delpino.- Difficulty as to Developmental Force of Gemmules.- As to their Spontaneous Fission.- Pangenesis and Vitalism.- Paradoxical Reality.- Pangenesis scarcely superior to Anterior Hypothesis.- Buffon.- Owen.- Herbert Spencer.- "Gemmules" as Mysterious as "Physiological Units."- Conclusion p. 223

CHAPTER XI.

SPECIFIC GENESIS.

Review of the Statements and Arguments of Preceding Chapters-Cumulative Argument against Predominant Action of "Natural Selection."-Whether any Thing positive as well as negative can be enunciated.- Constancy of Laws of Nature does not necessarily imply Constancy of Specific Evolution.- Possible Exceptional Stability of Existing Epoch.- Probability that an Internal Cause of Change exists.- Innate Powers somewhere must be accepted.- Symbolism of Molecular Action under Vibrating Impulses.- Prof. Owen's Statement.- Statement of the Author's View.- It avoids the Difficulties which oppose "Natural Selection."-It harmonizes Apparently Conflicting Conceptions-Summary and Conclusion p. 235

CHAPTER XII.

THEOLOGY AND EVOLUTION.

Prejudiced Opinions on the Subject.- "Creation" sometimes denied from Prejudice.- The Unknowable.- Mr. Herbert Spencer's Objections to Theism; to Creation.- Meanings of Term "Creation."-Confusion from not distinguishing between "Primary" and "Derivative" Creation.- Mr. Darwin's Objections.- Bearing of Christianity on the Theory of Evolution.- Supposed Opposition, the Result of a Misconception.- Theological Authority not opposed to Evolution.- St. Augustine.- St. Thomas Aquinas.- Certain Consequences of Want of Flexibility of Mind.- Reason and Imagination.- The First Cause and Demonstration.- Parallel between Christianity and Natural Theology.- What Evolution of Species is.- Prof. Agassiz.- Innate Powers must be recognized.- Bearing of Evolution on Religious Belief.- Prof. Huxley.- Prof. Owen.- Mr. Wallace.- Mr. Darwin.- *A priori* Conception of Divine Action.- Origin of Man.- Absolute Creation and Dogma.- Mr. Wallace's View. -A Supernatural Origin for Man's Body not necessary.- Two Orders of Being in Man.- Two Modes of Origin.- Harmony of the Physical, Hyperphysical, and Supernatural.- Reconciliation of Science and Religion as regards Evolution.- Conclusion p. 259

INDEX p. 808

LIST OF ILLUSTRATIONS.

	PAGE
Leaf Butterfly in flight and repose (from Mr. A. Wallace's " <i>Malay's Archipelago</i> ")	43
Walking-Leaf Insect	47
Pleuronectid, with the peculiarly placed eye in different positions (<i>from Dr. Traquair's paper in Linn. Soc. Trans.</i> , 1865)	49, 180
Mouth of Whale (<i>from Prof. Owen's "Odontography"</i>)	53
Four plates of Baleen seen obliquely from within (<i>from Prof. Owen's "Odontography"</i>)	54
Dugong	54, 189
Echinus or Sea Urchin	56, 181
Pedicellariæ of Echinus very much enlarged	59
Rattlesnake	62
Cobra (<i>from Sir Andrew Smith's "Southern Africa"</i>)	63
Wingbones of Pterodactyl, Bat, and Bird (<i>from Mr. Andrew Murray's "Geographical Distribution of Mammals"</i>)	77, 144, 171
Skeleton of Flying-Dragon	78, 172
Centipede (<i>from a specimen in the Museum of the Royal College of Surgeons</i>)	79, 173
Teeth of Urotrichus and Perameles	82
The Archeopteryx (<i>from Prof. Owen's "Anatomy of Vertebrata"</i>)	86, 146
Cuttle-Fish	88, 155
Skeleton of Ichthyosaurus	92, 121, 146, 191
Cytheridea Torosa (<i>from Messrs. Brady and Robertson's paper in Ann. and Mag. of Nat. Hist.</i> , 1870)	93
A Polyzoön, with Bird's-head processes	94
Bird's-head processes greatly enlarged	95
Antechinus Minutissimus and Mus Delicatus (<i>from Mr. Andrew Murray's "Geographical Distribution of Mammals"</i>)	96

	PAGE
Outlines of Wings of Butterflies of Celebes compared with those of allied species elsewhere	100
Great Shielded Grasshopper	103
The Six-shafted Bird of Paradise	104
The Long-tailed Bird of Paradise	105
The Bed Bird of Paradise	106
Horned Flies	107
The Magnificent Bird of Paradise	107
<i>(The above seven figures are from Mr. A. Wallace's "Malay Archipelago.")</i>	
Much enlarged horizontal Section of the Tooth of a Labyrinthodon (<i>from Prof. Owen's "Odontography"</i>)	118
Hand of the Potto (<i>from life</i>)	119
Skeleton of Plesiosaurus	120, 147, 192
The Aye-Aye (<i>from Trans. of Zool. Soc.</i>)	122
Dentition of Sabre-toothed Tiger (<i>from Prof. Owen's "Odontography"</i>)	125
Trilobite	149, 185
Inner side of Lower Jaw of Pleurodont Lizard (<i>from Prof. Owen's "Odontography"</i>)	162
Solenodon (<i>from Berlin Trans.</i>)	163
Tarsal Bones of Galago and Cheirogaleus (<i>from Proc. Zool. Soc.</i>)	173
Squilla	174
Parts of the Skeleton of the Lobster	175
Spine of Galago Allenii (<i>from Proc. Zool. Soc.</i>)	176
Vertebra of Axoloti (<i>from Proc. Zool. Soc.</i>)	179
Annelid undergoing spontaneous fission	183, 226
Aard-Vark (<i>Orycteropus capeneis</i>)	188
Pangolin (<i>Manis</i>)	189
Skeleton of Manus and Pes of a Tailed Batrachian (<i>from Prof. Gegenbaur's "Tarsus and Carpus"</i>)	192
Flexor Muscles of Hand of Nycticetus (<i>from Proc. Zool. Soc.</i>)	194
The Fibres of Corti	296
